## **Network Performance Intelligence**

## H5 Appliance Range H5-800 - 40 Gbit/s

## H5 audits vision: Network Flows visibility technology.

H5 audits R&D team has designed innovative technologies that enable enterprises, service providers and governments to enhance their global network and application visibility. With H5 Appliance, corporations can deploy an "easy to use" and comprehensive software and hardware solution that allows the various teams to access IT information in an adapted format (in regards to their position and expertise). Using a common tool for IT Reporting allows to broadcast a clear and comprehensive information on applications behavior and trending of the network. H5-Appliance provides a powerful network visibility solution for Network operations center to pilot the IT, for Network managers who are responsible for building and planning growth & IT changes and for the Helpdesk interfacing and supporting users with IT issues on daily basis.

The **H5-800** Appliance can easily be deployed in any network; it is installed on a 40 Gbps port mirroring interface or a NPB and doesn't require any network change or interruption. The H5-800 Appliance requires neither complex configuration nor architecture design; it inspects the traffic and extracts all required data in real-time and delivers the first reports and network application data a few minutes after power on. The H5-800 captures, analyses, records and reports network application behaviour and performance information for all the flows of all individual IP nodes active on the network without loss at the rates up to 40 Gbps.
